General Education is the University's curriculum that reaches every undergraduate student. It is guided by the requirements and expectations of NWCCU, USHE, and our own institutional goals.

The University's curriculum includes the General Education Core and Breadth areas and Baccalaureate Degree Requirements. Taken together, the courses that fulfill these requirements function as one curriculum focused on disciplinary ways of thinking and knowing.

The GE & BD requirements are codified by designations placed on courses that meet content criteria and serve a curricular need.

The goal of the General Education curriculum is to facilitate the development of skills and aptitudes that support student success to completion and long after graduation.

This goal is operationalized through the five General Education Learning Outcomes.
